

NetLiNQ EMS

4G Network SMO

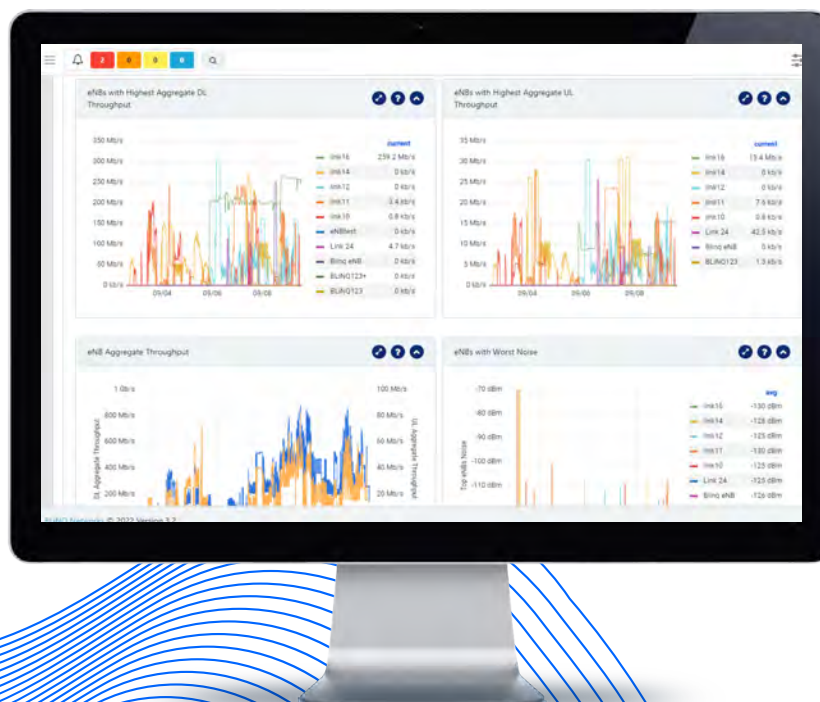

The Future of Network Management

All Your Devices, All Your Data, One Dashboard.

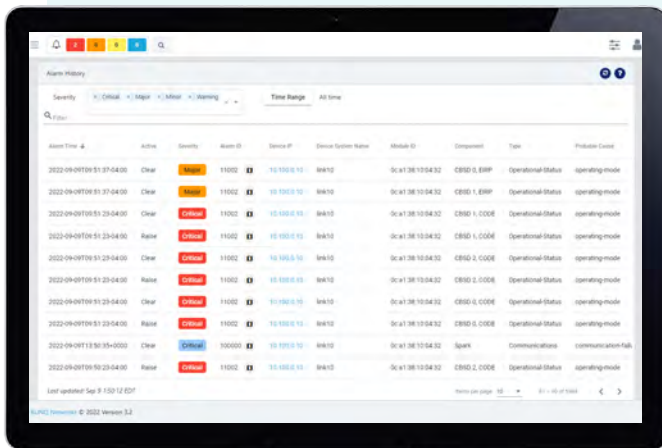

NetLiNQ EMS is a component of BLiNQ Networks NetLiNQ suite of products. It enables the service provider to provision, deploy, and manage BLiNQ fixed wireless access devices easily and rapidly.

NetLiNQ EMS uses container-based architecture and can run on bare metal or in a virtualized environment. Its components are based on proven and scalable open source software and run containerized, using a Docker engine.

Designed with the Future in Mind.

Centralized Dashboard

Bulk Operations

Data Management

Backup & Restore

Performance Graphs

Dynamic Network Discovery

Alarms Management

Inventory Exports by Type

- Centralized Dashboard to track your network health in real time.
- Bulk Operations support for simultaneous configurations or software upgrades.
- Fast, Flexible Data Management that facilitates network health evaluation.
- Backup & Restore data in the event of a crash.

- Real-Time Performance Graphs enable prompt response in managing devices based on the needs of the network.
- Dynamic Network Discovery that allows for newly deployed eNBs to be added automatically.
- Alarms Management maintains alarms/events by level of severity and features customizable alarms based on KPIs.
- Inventory Exports by Type (eNBs or CPEs) as .csv files.
