

MCRF-400

Connectorized Micro Cell

The Future
of Intelligent
Connectivity

High Power, High Capacity Seamless 5G Coverage

Unlock the future of intelligent, adaptive connectivity with our state-of-the-art 5G Micro Cell, featuring Zero-Touch Provisioning and machine learning-driven network optimization. BLiNQ's MCRF-400 leverages AI-based spectrum management to deliver unmatched coverage and capacity across bands* n48, n77/n78, and upper n77, ensuring robust, high-speed connectivity from dense urban hubs to sprawling rural regions.

Designed to provide the maximum capacity for CBRS networks when paired with a 17 dBi antenna, the MCRF-400 dynamically adjusts resources for peak efficiency. This Micro Cell enables real-time analytics, predictive traffic handling, and ultra-low-latency performance, supporting a wide ecosystem of devices, applications, and emerging AI-driven use cases.

Administered by BLiNQ's NetLiNQ Management Suite, the MCRF-400 also supports interoperability with third-party Service Management and Orchestration (SMO) systems through standard interfaces such as NETCONF, WebSockets, and REST/HTTPS.

For CBRS band networks, the MCRF-400 implements both n48 connectivity options – a stand-alone CBSD agent, as well as connectivity to a SAS PROXY embedded in the NetLiNQ SON Controller.

Whether it's streaming ultra-high-definition video, powering IoT devices, or enabling real-time virtual reality experiences, BLiNQ's AI-driven MCRF-400 is built to anticipate the needs of tomorrow's hyperconnected society by laying down a future-ready ecosystem.
